

AccuVote®-TSX SYSTEM

Touch Screen Voting Solution

AccuVote®-TSX Features:

- > Proven accuracy and reliability
- > Large touch-screen operation enables voters to make and change selections effortlessly
- > Eliminates overvoting/reduces undervoting
- > Voice-guidance for the visually impaired
- > Redundant, secure, non-volatile storage devices protect election results
- > Sophisticated data encryption protects stored election data

THE INDUSTRY STANDARD

Presenting AccuVote®-TSX, the evolutionary touch-screen voting system from Premier Election Solutions, the global leader in touch screen technology. The self-contained AccuVote-TSX provides election officials and voters with a proven and intuitive voting solution that is accurate, light weight and cost-effective.

The AccuVote-TSX automatically records and stores encrypted ballot information and election results. Each unit features intelligent voter card technology for unassisted, private voter activation.

The AccuVote-TSX prevents overvoting within a specific race, and displays a review page that shows all candidate selections to help eliminate undervoting. Candidate selections are easily changed by touching the initial selection and then selecting another candidate.

SECURITY

Every cast ballot is immediately encrypted and redundantly stored within the AccuVote-TSX voting station to secure ballot information. Ballot accumulation capabilities can accelerate the tabulation process and enable the secure collection of encrypted post-election data from multiple voting stations to a single voting station for subsequent transmission to a central election server.

Any voting station can act as an accumulation station, providing additional redundancy for securing ballot information at each voting location.

The AccuVote-TSX features outstanding memory storage capacity, supporting thousands of ballot styles in more than eight languages, including character languages. This capability allows the

NO OTHER VOTING STATION OFFERS SUCH A POWERFUL SUITE OF ACCESSIBILITY, SECURITY AND ADMINISTRATIVE FEATURES AS THE PREMIER ACCUVOTE-TSX.

Any voting station can be designated the precinct accumulator.

voting station to easily support large jurisdictions and early voting applications, where every ballot style within a particular jurisdiction can be accessed from each voting station. Provisional ballots can be electronically captured pending future voter verification. The system provides a full complement of electronic audit files that may be converted to hard copies on demand.

LIGHTWEIGHT

One person can assemble the voting station in under one minute. With a total voting station weight of only 26 pounds, poll workers of all ages can easily transport the AccuVote-TSX to voting locations. And the compact, space-saving size of the unit allows for stacking horizontally or vertically to allow for easy storage.

ACCESSIBILITY

The AccuVote-TSX sets a new standard for accessibility in the direct recording electronic system industry. The voice-guidance feature enables blind or visually impaired persons to vote unassisted in complete privacy by sequencing through the entire ballot using verbal prompts. The AccuVote-TSX even allows voters to control the speed of the audio ballot. The unit's ballot magnification feature –

which can be activated by the voter at any time during the voting process – enables people with limited sight to easily read the touch-screen ballot and make selections. And the touch-screen can be adjusted to several angles to accommodate voters in wheelchairs and ensure maximum voter privacy. The TSX also works with a Sip and Puff interface as well as a three-switch interface for voters with dexterity limitations.

PROVEN FUNCTIONALITY

The AccuVote-TSX features an integral printer which produces vote totals for respective voting stations or precincts as part of the permanent election record. The comparison of the printed reports with electronically stored results provides a very important confirmation of tabulation accuracy during the election canvassing process.

The voting station works in conjunction with Premier's proven GEMS® Election Management Software application. This multi-functional Microsoft®-based software seamlessly performs all election functions and concurrently and automatically generates all appropriate ballot styles for each precinct. Postscript ballot files can be created for postal ballots, eliminating the need for manual typesetting and proofing, and vote tally files are created to produce and distribute accumulated election results.
